

MetronLabs Security Practice

Integrate your security apps, data, and workflows with the rest of your business

If you're a mature organization, you have multiple applications: SIEM, Ticketing, Analysis, and Reporting systems spread across different departments and teams. Metron Labs will get your systems talking to each other and help you make informed decisions to keep your networks secure.

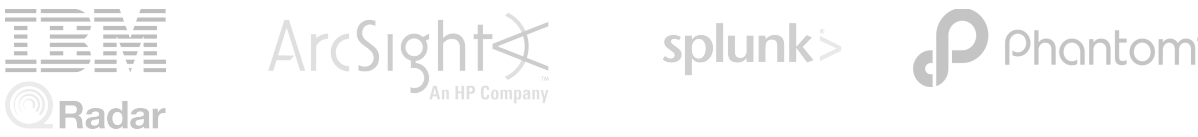

Security - Applications Integration

Security Applications & SIEM Integration

We help integrate multiple technologies across diverse security applications and customize it based on your workflow. Here are a few we support.

Security Analytics & SIEM

Threat platforms

Orchestration & Automation

Network and Infrastructure security

Features

On Demand

Fixed Price

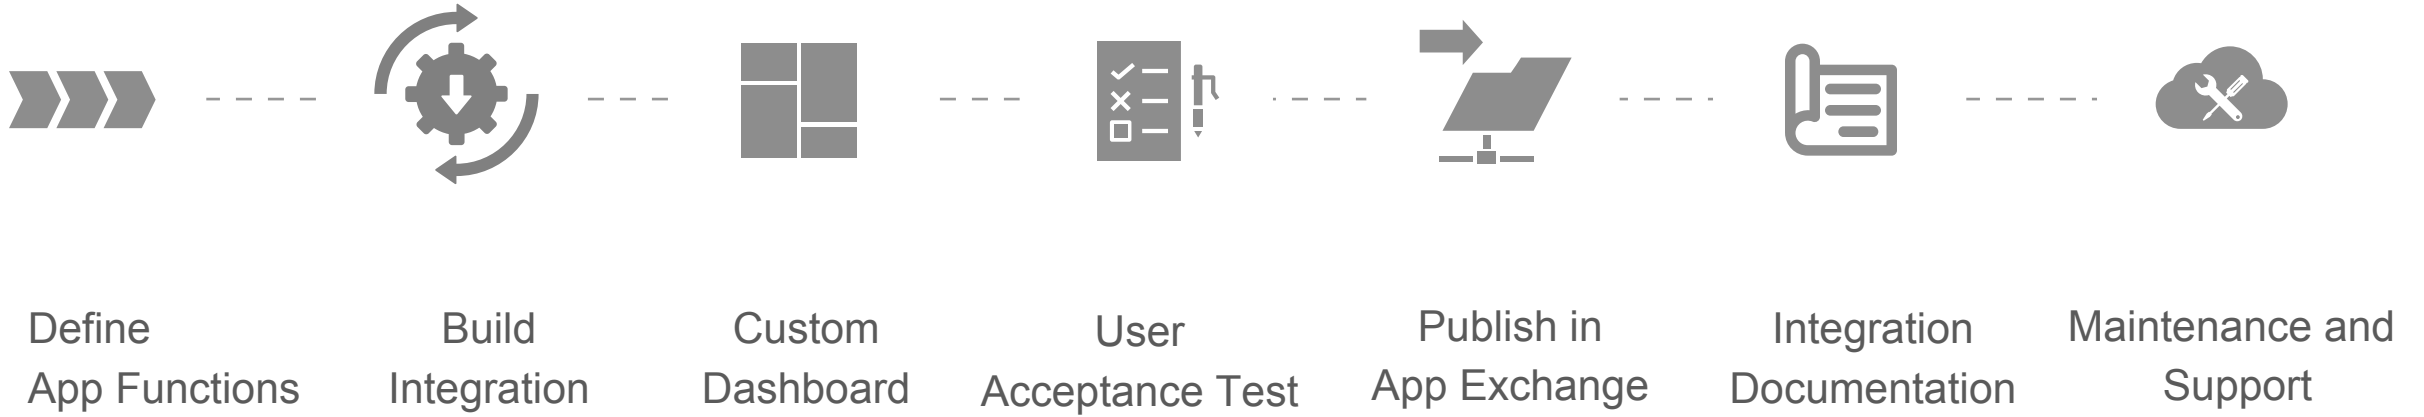

Continuous Support

Reduced Technical Debt

Streamlined Process

Case Study - Dark Web

Business Case: Integrate client's platform with IBM QRadar and enable continuous integration for easy deployment and customer success.

Implementation: Fully integrated the client's platform - which analyses the open and dark web for digital threats - with IBM QRadar and built custom dashboards for digital risk. Custom workflow integration to support

Outcome: Developed the integration in less than 4 weeks and published the app on the IBM X-Force Exchange. In addition, we built flexible integrations for several other security and orchestration products.
